Abstract

The project is a registration system for participating in activities. It is a system for announcing the recruitment of participants, where the activity creators can check the information of the applicants and verify their participation documents.

The objective of this research is to develop a registration system for participating in activities to reduce the steps and time in recruiting participants by recording data in an online format instead of using documents. This allows interested individuals to conveniently and quickly apply for activities and check their participation results.

The satisfaction evaluation results of the users of the registration system for participating in activities show an overall satisfaction with the system. The average satisfaction score is 4.14 with a standard deviation of 0.96, indicating a high level of satisfaction. The system is designed to be user-friendly, with the highest satisfaction rating for ease of use at an average score of 4.26.
