## Abstract

Project Management Information System For Cooperative Education as a Web Application The project aims to develop a web-based application for managing data of cooperative education students who have completed their internships with partnering organizations. Its objectives include facilitating the management of data for cooperative education coordinators, allowing them to manage information of partnering organizations and students, approve student feedback, and assign access rights. For students, the system enables them to search and provide feedback on partnering organizations. General users, such as prospective students, can search and view details of organizations they are interested in Tools used include MySQL database, PHP, HTML, JavaScript, and CSS.

The evaluation of user satisfaction with the information system for managing cooperative education student data yielded an overall satisfaction score with a mean of 4.21 and a standard deviation of 0.74, indicating a high level of satisfaction.
